

EASY LIFT 3000

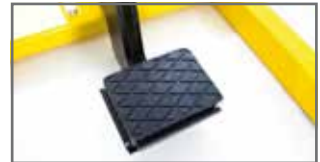

È un cric idro-pneumatico mobile, con strutture a colonna, progettato e costruito per sollevare le vetture dalla ruota anteriore o posteriore o dal sottoporta utilizzando le apposite forche. I movimenti di salita e discesa sono ottenuti tramite un carrello fissato ad una catena a maglie collegata ad un pistone idraulico. Comandi a pompa idro-pneumatica, ridotte dimensioni d'ingombro ed una notevole maneggevolezza, ottenuta attraverso le ruote che ne consentono un agevole spostamento.

EASY LIFT 3000 is a mobile hydraulic crick lift, with a column structure, built and manufactured to allow the operator to work on wheels or under-doors at man's height.

The raise and descent movement are obtained using a sleigh fixed to a chain connected to an hydraulic cylinder. Hydro-pneumatic pump with hand remote control, reduced dimensions and a remarkable ease of handling, obtained thanks to wheels allowing an easy displacement are its main features.

OPTIONAL

Tampone sottoporta

APPLICAZIONI | APPLICATIONS

Sollevamento su ruote anteriori
Lifting on the front wheel

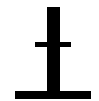

Sollevamento su sottoporta
Lifting on the underdoor

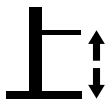

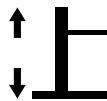

Sollevamento su ruote posteriori
Lifting on the rear wheel
